SUMMARY

Senior Software Engineer with **13 years of experience** building web applications for banking, payments and education platforms used by **millions of people**. I work across the stack with Angular, React, Next.js, Node.js (NestJS, Express) and TypeScript, from microfrontend architectures and design systems to REST APIs, enterprise SSO and **AI-powered** features. I am a passionate **speaker at Angular and Javascript meetups** and a technical advocate, committed to mentoring talent and delivering scalable software that evolves with business objectives through Agile methodologies

SKILLS

Angular, Angular Universal(**SSR**), **NgRx**, RxJs, Signals, **TypeScript**, JavaScript, Redux, **NestJS**, **AI Integration**, **LLMs,** AI Agents, **React.js, Next.js**, React Query, Redux Toolkit, HTML5, CSS3, SASS, **Node.js**, **Express**, Prisma, Microfrontends, Component Libraries(Material UI, Angular Material, PrimeNG, Nebular, Bootstrap, Tailwind CSS), Lodash, Design Systems, Monorepos, **System Design**, **REST** APIs, **API integration**, Webpack, Vite, Karma/Jasmine, Jest, CI/CD, Pipelines, **AWS**, **Azure AD** (MSAL), OAuth2/OIDC, JWT, MFA (TOTP), Docker, **Java**, **Spring Boot**, **PHP** (Laravel, October, Drupal, Symfony and Wordpress), PostgreSQL, **MySQL**, MongoDB, OOP, GIT, JQuery, SCRUM, Functional Programming, Performance Optimization.

WORK EXPERIENCE

10Pearls

July 2026 - October 2026

Technical Lead & Senior Full Stack Engineer

- As Technical Lead of a 4-developer team, defined the architecture and technical roadmap for a **config-driven**, **multi-step form platform** built on **micro frontends**: single-spa shell, Angular 16/19/21 apps and a React products app coexisting, **Turborepo monorepo**, JSON Schema forms rendered with **JSON Forms**, and UI embedded across applications as parcels.
- Designed the Node.js and TypeScript **microservices** layer (Express, REST APIs): a server-side weighted scoring engine, PostgreSQL (JSONB) with immutable versioned records (draft/publish) so historical results never change when business rules evolve, Excel template generation and validated upload with server-side score recalculation, **cross-service authorization**, and **feature-flag** rollouts.
- Set the team's engineering standards and decision-making process: **technical design documents** with explicit trade-offs, dependency-driven task breakdown, code review practices, a **shared component library strategy**, and an **AI-assisted PR review** pipeline in Bitbucket to reduce review time and enforce design-system conformance.

Tech Stack:
- Frontend & UI Architecture: Angular (RxJS, Signals), React (Zustand), single-spa Microfrontends, Lit Web Components, TypeScript, JSON Forms, Design Systems / Component Libraries.
- Backend & Infrastructure: Python, Node.js, TypeScript, PostgreSQL (JSONB), REST APIs, Monorepos (Turborepo), GCP (Cloud Run), Docker.
- Leadership & Tools: Technical Design Documents (TDD), estimation and roadmapping, code review, Cypress, Bitbucket Pipelines, Jira, Confluence, Figma, Claude Code / AI-assisted workflows.

Switch Software Solutions

July 2021 - Feb 2026

Full-stack software developer

- Led the development of **Verifone's** Merchant Order Portal — a global payments and POS provider — using **Microfrontends** and **Monorepo architecture** to support **millions of users** through a shared **Design System**.
- Architected and developed a **scalable multi-app ecosystem** from **MVP to production**, implementing a **hybrid SSO solution** integrating **Azure AD, Radius, and MFA (TOTP) via AWS Cognito**, reducing user onboarding time by **40%.**
- Optimized frontend performance in high-concurrency environments, achieving a **30% LCP improvement** and **25% lower API latency** through NgRx state management and **Core Web Vitals** strategies.
- Built the **real-time** lead grid of a **sales intelligence** desktop app fed by a web scraping pipeline, using NgRx and RxJS for state, SignalR over WebSockets for live updates and AG Grid virtual scrolling. The grid handled **100,000+ records**, client memory use dropped about 40%, and memory leaks found with Electron profiling were removed.
- Designed and implemented **AI-powered validation assistants**, reducing B2B order configuration errors by **30%** and technical support requests by **50%** through **real-time streaming and validation**.
- **Migrated** a large-scale, business-critical application from **AngularJS to the latest Angular version**, ensuring system consistency, data integrity, and enterprise-grade security.
- **Directed the technical hiring process**, conducting over **20+ interviews** and designing the onboarding roadmap for new senior and junior hires.

Tech Stack:
- Frontend & UI Architecture: Angular (RxJS, NgRx, Signals), Electron, SSR (Angular Universal), React, TS, Redux Toolkit, React Query, Next.js, Microfrontends, Lodash, Design Systems (PrimeNG, Angular Material, TailwindCSS, Styled Components).
- Backend & Infrastructure: Java, Spring Boot, NestJS, AI Agents, LLMs, Prompt Engineering, Node.js, Express, Prisma, Azure AD (MSAL), OAuth2/OIDC, JWT, MFA (TOTP), AWS (Cognito, EC2, Lambda, S3, IAM User pool, API Gateway), Docker, REST APIs.
- Development Tools: Vite, Karma/Jasmine, Jest, Git, MCP, CI/CD Pipelines, Postman, Jira, Confluence, Figma.

ADDITIONAL & PREVIOUS WORK EXPERIENCE

2innovate

Dec 2019 – Sep 2021

Senior Frontend Developer. Built the web front end of **Frame Banking**, a digital banking platform, for **BTG Pactual** and **Santander** (100,000+ daily transactions). Improved console response times by 25% with NgRx, reached 60% code reuse through shared component libraries, and upgraded legacy apps from Angular 5 with 100% test coverage. Angular, TypeScript, NgRx, Redux, Sass, Angular Material, Nebular, Bootstrap, Oracle, MariaDB, Docker, OpenShift (Kubernetes), Jenkins.

Arnaldo C. Castro S.A

April 2018 – May 2019

Full Stack Developer. Led development of the **Ceibal Student Portal**, Uruguay's national education platform: database schemas, RESTful APIs, UI flows and unit and integration tests. PHP (Laravel, October CMS), MySQL, MongoDB, JavaScript, Docker, GitLab.

Desoft S.A

September 2013 – June 2017

Full Stack Developer | Freelance Consultant. Built and maintained 15+ web portals for clients including the national ministries MINCEX and MINCOM, and a series of technical e-books for a medical publisher. PHP (Symfony, Drupal), MySQL, PostgreSQL, JavaScript, Git.

EDUCATION & ADDITIONAL INFORMATION

Technological University of Havana, Cuba – Sep 2008 - Jul 2013
Bachelor of Science - BS, Computer Engineering
Language proficiency: English (Fluent), Spanish (Native), French (Fluent).
Certifications: Scrum Foundation Professional Certification - SFPC™, Claude Code in Action
